PROJECTS

AI Meeting Assistant
FastAPI, React, Python, LLMs, Gemini API, NLP
- Built an AI agent that detects repetitive questions during online meetings and automatically generates contextual responses.
- Used semantic similarity techniques to identify duplicate questions and highlight unique discussions for speakers.
- Designed a real-time dashboard to display meeting insights, unanswered questions, and AI-generated summaries.
- Reduced information overload by filtering repetitive interactions and improving meeting productivity.

DevOps Incident Post-Mortem & Root Cause Finder
AI-Powered DevOps Incident Analyzer, Java/Spring Boot, Cognee Cloud memory, LLMs, Vector Database, Docker
- Developed an AI-powered platform that analyzes logs, alerts, and incident reports to identify probable root causes.
- Integrated memory-based retrieval using Cognee to learn from previous incidents and recommend proven resolutions.
- Automated post-mortem generation with incident timelines, impact analysis, and remediation suggestions.
- Reduced manual debugging effort by enabling engineers to retrieve similar historical incidents instantly.
